PROTECTION FUNCTIONS	
Burnout Protection	Temperature of charger exceeds the limitation. The charge will low down the power load. Temperature of environment exceeds 65℃, the charger will stop charging and switch itself to standby mode until temperature of environment goes down.
Protection for Reverse Connection of Batteries	The circuit inside the charger shuts down with batteries when the batteries are connected reversely and will not damage the charger.
NO-load Protection	There is no output when the batteries are not connected.
Short Circuit Protection	The circuit inside the charger shuts down with batteries when output is short circuit. The charger will start charging only after troubleshooting and restart the charger.
Automatic shutdown when fully charging	The charging automatically turns off after the battery is fully charged according to the charger’s judgment.
